PROFESSIONAL SUMMARY

Motivated Computer Science undergraduate with hands-on experience in AWS cloud services, Linux-based server deployment, containerization, and CI/CD workflows. Skilled in deploying scalable applications using Docker, GitHub Actions, and AWS EC2. Passionate about cloud infrastructure, DevOps automation, and modern deployment practices.

TECHNICAL SKILLS

- Cloud Platforms: Amazon Web Services (AWS)
 - AWS Services: S3, EC2, IAM, RDS, EKS, Lambda, CloudWatch, CloudFront
 - DevOps & Infrastructure: Docker, Kubernetes, CI/CD Pipelines, GitHub Actions, Nginx
 - Tools & Technologies: Git, GitHub, Linux (Ubuntu)
 - Development: Java, JavaScript, Node.js, Express.js, React.js
 - Cloud Concepts: Cloud Computing, CDN, Static Web Hosting, Serverless Architecture, IaC Fundamentals, Networking Basics, IAM Policies
-

EDUCATION

Bachelor of Science in Computer Science 2023 - 2027 Modern Institute Technology and Research Centre

PROJECTS

AI-Based Digital Evidence Authenticity & Detection Platform

- Implemented deployment workflows and backend infrastructure management for secure digital evidence processing.
- Applied DevOps practices including Git-based version control, build management, and deployment automation.
- Worked on containerized backend services and environment configuration for scalable application deployment.
- Integrated secure file handling, validation mechanisms, and backend API workflows.
- Supported integration of AI-powered deepfake detection modules within the application architecture.
- Collaborated using structured GitHub workflows to improve development efficiency and system reliability..
- <https://evi-auth.vercel.app/>

AWS EC2 WEB SERVER DEPLOYMENT

AWS EC2 | Linux (Ubuntu) | Bash | IAM | Security Groups

- Provisioned and configured an AWS EC2 instance running Ubuntu Linux to host a web server, managing the full deployment lifecycle from AMI selection to launch.
- Implemented IAM roles and security group rules to restrict inbound/outbound traffic, enforcing least-privilege access and secure SSH key-pair authentication.
- Configured Apache/Nginx web server on Linux using Bash scripts, deploying a live web application accessible over HTTP on the public EC2 endpoint.
- Monitored server health and resource utilization using AWS CloudWatch, setting up basic alerts for CPU and memory thresholds.

CloudCart – MERN E-Commerce Application

- Developed and deployed containerized MERN stack application using Docker and Docker Compose.
- Configured CI/CD pipeline using GitHub Actions for automated build and deployment workflow.
- Deployed application on AWS EC2 with Nginx reverse proxy configuration.
- Managed environment variables and backend configuration for secure deployment.
- Used Git and GitHub for version control and collaborative development workflow.
-  GitHub: <https://github.com/swatiparihar18/CloudCart.git>

CERTIFICATION

- Cloud & DevOps Training – SkillsOcean
- MERN Stack Development Training – SkillsOcean
- Java Full Stack Development Training – Upflairs

EXPERIENCE

Success Ladder Technologies Pvt. Ltd. (SLT) — DevOps Engineer Intern

- Onsite|  May 2026 – Present
- Selected as a DevOps Engineer Intern in the Software Development Department for a 3-month internship program
- Working on DevOps practices including CI/CD pipeline automation and deployment workflows
- Gaining hands-on experience with tools like Jenkins, Git, Linux, and version control systems
- Collaborating with development teams to support build, integration, and release processes
- Following company standards, discipline, and software development lifecycle practices
